U Magic Quick Guide

First of all, thank you very much for using U Magic fingerprint intelligent and safe expert! This manual will guide you how to quickly register and use U Magic by taking Windows XP/Windows 7/Windows 8/Windows10 operation systems as examples.

1. Initial Registration

When using U Magic for the first time or after resetting registration information in use, you need to register your fingerprint and input password firstly. Then you will obtain the management authority and get access to all the functions of U Magic.

Please insert U Magic into the USB port of the computer and wait for the system to automatically install drive program and identify U Magic device. Click “My Computer” and you will find there will be two more Drive Letters, which are two ordinary storage areas in your computer registration program storage area and encrypted storage area. Open the “registration area” of U Magic and double click  to start the registration program.

1. Set Password

USB 3.0-*U Magic*

Set Password

When you fail to enter this software via fingerprint verification, you can input this password.

Input password: *****

Length of password is 6-16

Confirm password: *****

Next

After entering the password twice by following the prompt, click [Next] to continue to register fingerprint.

2. Register Fingerprint

Please select your finger corresponding to the finger on the picture to register.

According to the prompt: Horizontally put your finger on the fingerprint sensor of U Magic to register your fingerprint. Repeatedly press and lift your finger until the progress pattern is completely covered. Click [Finish Registration] to finish the fingerprint registration. When registering your fingerprint, please keep your fingerprint clean. Whenever you are registering, please adjust the touch part between your finger and the fingerprint frame, so that wider fingerprint information can be recorded.

3. Advanced Functions of U Magic

After registration, you will enter the main menu. At this time, you can use the registered finger to open the encrypted area of U Magic. After registration, you have no need to start the registration program again when you use U Magic.

If you need to add, delete or revise your fingerprint, reset registration information, partition and so on, please enter the “Manage Fingerprint” , “Revise Password” , “Password Memory” and “Other Functions” in the above interface.

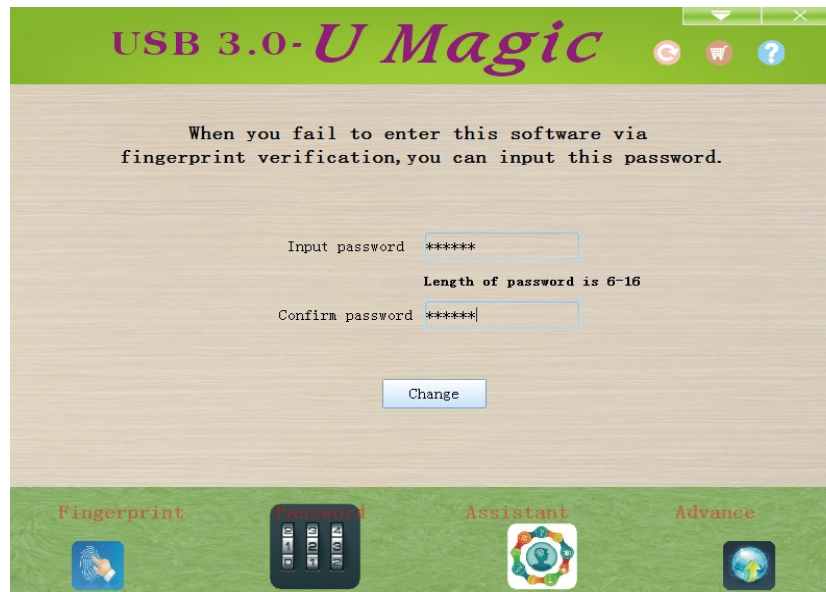

①Manage Fingerprint

Click  , and choose the actual finger corresponding to the shown fingerprint to register multiple fingerprints. If you need to add, delete or revise your fingerprint, reset registration information, partition and so on, enter the “Manage Fingerprint” , “Revise Password” , “Password Memory” and “Other Functions” in the above interface.

② Revise Password

Click  to enter the interface of [Revise Password];

After entering the password twice by following the prompt, click [Revise Password] to finish the operation.

③ Password Memory

Use fingerprint to replace password input: You need to use your fingerprint to match with corresponding password. Click  to enter the interface of [Password Memory];

Choose the orange  (registered fingerprint) to enter following interface:

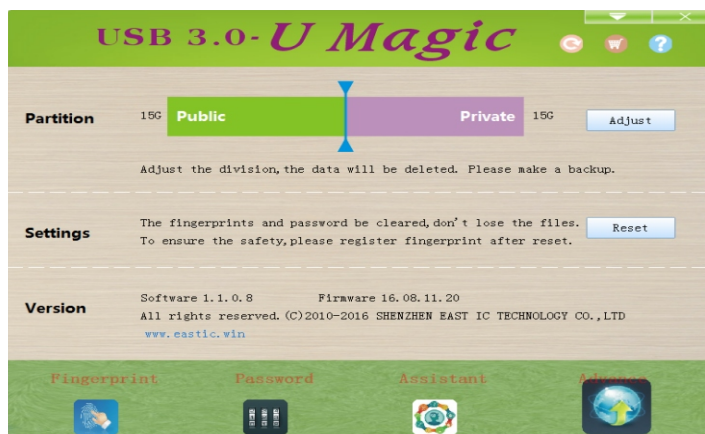

Input corresponding information in the input field, such as: QQ name and login password, e-mail and login password, Taobao account and login password, game account and login password, etc. Click [Save Password] to complete the operation. When you use other application software, move your mouse to the password box of the application, you can put your finger on the fingerprint sensor, and then the fingerprint  , which has become a memorized password will input corresponding memorized password, so that the password can be replaced by the fingerprint.

For example, in the following QQ application program, click the mouse to the password box, and then put your finger which has been registered as a memorized password of QQ on the fingerprint sensor of U Magic, then the corresponding memorized password will be automatically input, so that the password can be replaced by the fingerprint. Passwords of other applications can also be replaced with the fingerprint, such as password of Zhifubao, password of bank cards and game accounts, etc.

④Other Functions

Click  to enter the interface of [Other Functions];

(1) Adjust Division

Drag the adjusting bar  to the left or right to change the capacity of the opened area and encrypted area. Click [Adjust Division] to finish the operation. According to the prompt after adjusting division, format the USB flash disk to achieve the effect of free division.

(2) Restore Settings

Click [Restore Settings] and the registered fingerprints and passwords will be cleared and the device will be restored to default settings. To prevent the data in U Magic from missing and ensure the safety of data, please make a backup data in advance. Please immediately reinsert U Magic to register fingerprint and new password after restoring settings.
